Business Case

PurePlate

PurePlate - Food Delivery App

Company Profile

PurePlate is a food delivery app concept designed to provide practical, reliable, and transparent dining solutions for modern society. In an era where people value convenience and efficiency, PurePlate connects users with a wide range of food options from popular restaurants to hidden local gems while supporting the growth of small and medium-sized culinary businesses (UMKM) in Indonesia. Targeted at urban residents aged 18–45, including students, office workers, and families, PurePlate aims to simplify everyday dining experiences with trust and accessibility.

Objective

The main objective of PurePlate is to create a homegrown food delivery platform that not only meets the rising demand for convenience but also promotes inclusivity by empowering local culinary businesses. PurePlate strives to deliver a seamless ordering process, transparent pricing, and greater food variety to enhance users daily lives.

Problem

- Hidden or non-transparent delivery fees.
- Limited restaurant options, often dominated by large chains.
- Unpredictable and inconsistent delivery times.

Solution

- Transparent pricing, ensuring users are not surprised by hidden costs.
- Diverse restaurant options, including both mainstream and local culinary businesses.
- Reliable delivery tracking, providing real-time updates from preparation to arrival.

Featured Apps

- Home: Displays promotions, nearby restaurants, trending dishes, and includes a search bar for quick access.
- Categories: Allows users to browse food by cuisine type (Indonesian, Asian, Western, snacks, beverages) with filters for ratings, price range, and promotions.
- Orders: Divided into Ongoing (real-time order tracking) and History (past orders with quick re-order).
- Favorites: Saves preferred restaurants for faster future access.
- Profile: Stores personal information, payment methods, addresses, and provides access to customer support.

Test Plan

Objective : Ensuring that the application runs according to requirements, is free from errors, and provides a good user experience.

Scopes (Features that will be tested) : Favourite, Home, Change profile, Filter category, Order Ongoing, Order History, Payment Method

The reason why we are testing: to make sure the application works correctly, is free from critical bugs, and meets user expectations.

Who will be the tester : Arya, Naufal, Andhika, Thio, and Amarr.

Test Case Pureplate

Test Case Name : PurePlate Features

Test ID : 001

Priority : High

Hardware Required : Iphone Smartphone

Software Required : iOS

Duration : 15 Minutes

Setup : -Install Figma

ID	Test Step	Expected Result	Result	Bug ID
001	Opening the “PurePlate” app	App launches and shows splash screen		
002	User Creates Account / Signs Up	User successfully created an account		
003	User Signs in	User successfully logs in and redirected to the home page		
004	Tapping on “Favourites” on the navigation bar	User will be directed to the favourites page		
005	Using the filter on the category tab	User will be able to see the items based on the filter		
006	Seeing the orders history	User will be able to see the past order that the user made		

007	Seeing the ongoing order	User will be able to see the ongoing orders		
008	Changing credentials on the profile page	The page will update to the user new credentials		
009	Choose a delivery location from your saved addresses	User will be able to choose the delivery location from user saved address		
010	Choose a payment method	User will be able to choose the payment method		
011	Click customer service	Will display customer service page		
012	Add item to the cart	User will be able to add item to the cart		
013	Choose nearby restaurant	User will be able to choose nearby restaurant		

Test Techniques

In the test techniques, the testing technique used is Experience-based Test Techniques, as the testing was conducted on a design prototype in Figma. The following are three methods that were applied:

- *Error Guessing* : The testing was based on the team's experience and intuition regarding potential design errors. For example, they identified areas where users might

misunderstand button functions, such as an unclear "cart" icon, payment confirmation text that wasn't prominent, or the "Checkout" button being too close to the "Cancel" button.

- *Exploratory Testing* : Testing involves exploring the prototype we created in Figma directly, without following a specific scenario sequence, as if they were a user experiencing the application for the first time. Testers can try moving between pages, pressing various buttons, or repeating the ordering process to see if the design flow feels natural and understandable.
- *Checklist-based Testing* : This testing is conducted to verify key design elements for compliance with UI/UX principles. Some examples of checklist items include: color and font consistency across pages, text legibility on promotional banners, appropriate spacing between input components such as login forms, and the functionality of navigation buttons that take users to the correct page.

Test Types

In the test types, the testing focused on Functional Testing, as it was conducted on the Figma prototype to ensure that all main functions, such as login, ordering, and payment work according to user requirements.

No	Functions tested	Test Steps	Expected results	Notes
1	Login & Register	1. Go to the Sign In page 2. Enter a valid email address and password. 3. Click the Sign In button	If the data is valid, it will go to the Home page.	
2	Add to Cart & Order Summary	1. Select the "Mangkok Jiwa" restaurant 2. Add two menu items to your cart 3. Click the check cart button.	Both menus appear in the cart with the correct quantity and total price (food price + shipping)	
3	Payment Process	1. From the Cart page, click the "Payment Method" button 2. Select the OVO / QRIS / DANA payment method 3. Press the "Pay Now" button	The system displays a "Payment Successful" notification and the order status changes to "Order Ongoing."	
4	Delivery Tracking	1. After payment, go to the Order → Ongoing tab	Status changes in sequence: Preparing →	

		2. Check the order status	Out for Delivery → Delivered.	
5	Order History	1. After the order is completed, go to the Order → History tab	The order history appears in full (restaurant name, date, menus, total price, status).	
6	Favorites	1. On the restaurant page, tap the Favorites icon 2. Open the Favorites page	The restaurant has been successfully added and appears in the Favorites list.	
7	Saved Location	1. Open the profile menu 2. Click saved location 3. Click delete icon from one of the saved location	The saved location that has been deleted will be removed from the page	
8	Profile Setting	1. Open the Profile menu 2. Change your username or phone number 3. Save your changes	Profile data is saved and appears as changes occur.	

Automation Testing

Our group chose Katalon Studio because it is comprehensive and efficient. The tool allows us to create automated tests for Mobile within a single platform, without needing to build a framework from scratch. Its Record & Playback feature speeds up the creation of basic test cases, while the scripting support (Groovy) provides flexibility for more complex scenarios. In addition, the built-in reporting feature, which presents test results in clear visualizations, greatly helps our group monitor application quality in real time.

Bug Management Analysis

Bug ID	Project Name	Tester	State	Date Opened
1	Pureplate 1.0	Amarr	Assigned	04/12/2025
Severity	Priority	Risk Priority Number	Owner	Estimated Fix

2	1	2	Andhika	11/12/2025
Summary				
Back button is unresponsive, trapping user on the page				
Steps to Reproduce				
1. Open Pureplate App. 2. Navigate to Order Ongoing page. 3. Click the ongoing order. 4. Tap the "Back" (arrow) icon on the top left corner.				
Isolation				
The UI button shows a pressed/ripple effect when tapped, but no navigation action occurs. This issue happens consistently (100%) every time the user enters the Order Ongoing page.				
Status				
4/12: Reviewed and opened this issue. 7/12: Assigned to developer. Who thinks can fix it in a couple weeks.				

Bug ID	Project Name	Tester	State	Date Opened
2	Pureplate 1.0	Amarr	Assigned	04/12/2025
Severity	Priority	Risk Priority Number	Owner	Estimated Fix
2	2	4	Andhika	11/12/2025
Summary				
Phone and Camera icons are unresponsive in Customer Service menu				
Steps to Reproduce				
1. Open Pureplate App. 2. Go to Profile > Customer Service. 3. Tap the Phone icon or Camera icon next to the CS agent.				
Isolation				
Camera and Phone permissions have already been granted in the device settings, but the button still does not respond. The Chat field on the same page works normally; only the Phone and Camera buttons are experiencing issues.				
Status				

4/12: Reviewed and opened this issue.
7/12: Assigned to Andhika. Who thinks can fix it in a couple weeks.

Bug ID	Project Name	Tester	State	Date Opened
3	Pureplate 1.0	Amarr	Assigned	04/12/2025
Severity	Priority	Risk Priority Number	Owner	Estimated Fix
3	2	6	Andhika	11/12/2025
Summary				
Unable to delete saved addresses; delete action triggers no response				
Steps to Reproduce				
1. Open Pureplate App. 2. Go to Profile > Saved Location. 3. Select an existing address and tap the "Delete" (trash bin) icon.				
Isolation				
Add New Location works normally; the issue is specifically with the Delete function. No error message (such as "Failed to delete") or confirmation pop-up appears. The button simply does nothing.				
Status				
4/12: Reviewed and opened this issue. 7/12: Assigned to Andhika. Who thinks can fix it in a couple weeks.				

Bug ID	Project Name	Tester	State	Date Opened
4	Pureplate 1.0	Amarr	Assigned	04/12/2025
Severity	Priority	Risk Priority Number	Owner	Estimated Fix
4	3	12	Andhika	11/12/2025
Summary				
Promotional banner is static and does not redirect to offer details				
Steps to Reproduce				
1. Open Pureplate App. 2. Go to the Home				

3. Locate the main promotional banner. 4. Tap on the active banner image.
Isolation
When the banner is pressed, it shows no visual feedback, such as a highlight or pressed state, making it appear as if it is only a static image.
Status
4/12: Reviewed and opened this issue. 7/12: Assigned to Andhika. Who thinks can fix it in a couple weeks.

Bug ID	Project Name	Tester	State	Date Opened
5	Pureplate 1.0	Amarr	Assigned	04/12/2025
Severity	Priority	Risk Priority Number	Owner	Estimated Fix
1	1	1	Andhika	11/12/2025
Summary				
Virtual keyboard fails to appear when tapping the Search bar				
Steps to Reproduce				
1. Open the Pureplate app. 2. Go to the Home. 3. Tap the Search here field at the top of the screen.				
Isolation				
When the search bar is clicked, the text cursor does not appear or blink. The keyboard appears normally when clicking other fields, such as the Login field.				
Status				
4/12: Reviewed and opened this issue. 7/12: Assigned to Andhika. Who thinks can fix it in a couple weeks.				

Summary

Group 5 conducted a comprehensive quality assurance process for the PurePlate food delivery application to ensure it meets user requirements and functions correctly. The team utilized Experience-based techniques on a Figma prototype, including Error Guessing, Exploratory Testing, and Checklist-based methods. Alongside Katalon Studio for automation to validate core

features such as Login, Order History, and Payments. The testing analysis identified five functional bugs with varying risk levels. The most critical issue was the virtual keyboard failing to appear in the Search bar (Severity 1), followed by high-priority navigation issues where the "Back" button and Customer Service icons became unresponsive. Due to these significant defects, the application requires immediate remediation by the development team, with fixes targeted for December 11, 2025, to ensure the platform is stable and ready for launch.
